

**15 ChatGPT
prompts to save
you 15 hours
every week**

1. The "Explain Like I'm Smart" Prompt

Explain [complex topic] to me like I'm intelligent but unfamiliar with the jargon.

Use analogies to concepts from [field I know well].

Don't dumb it down—just make it accessible.

Why it works: No more "imagine a balloon" explanations. Respects your intelligence.

Use case: Learning new technical concepts fast.

2. The "Critic Mode" Prompt

```
You are a harsh but fair critic.
```

```
Review this [content type]: [paste content]
```

```
What's weak? What's unclear? What's missing?
```

```
Be brutal. I want to improve, not feel good.
```

Why it works: ChatGPT is too nice by default. This forces honesty.

Use case: Editing your own writing, finding holes in arguments.

3. The "Expert Interview" Prompt

You are [specific expert – e.g., "a senior DevOps engineer at Google"].

I'm going to ask you questions about [topic].

Answer from that expert's perspective with:

- Specific technical details
- Real-world tradeoffs
- What's overhyped vs. underrated

Why it works: Gets you expert-level insights without scheduling calls.

Use case: Learning from virtual mentors in any field.

4. The "Meeting Prep" Prompt

I have a meeting with [person/role] about [topic] in 30 minutes.

Help me prepare:

1. Top 3 questions they'll likely ask
2. Key points I should make
3. Potential objections and how to address them
4. One question I should ask them

Why it works: Turns ChatGPT into your pre-meeting coach.

Use case: Sales calls, investor pitches, tough conversations.

5. The "Reverse Brief" Prompt

I want to [achieve X outcome].

Don't tell me how to do it yet.

First, ask me 5 clarifying questions to understand:

- My constraints
- My resources
- My timeline
- My actual goal (which might be different from what I said)

Why it works: Prevents ChatGPT from giving generic advice before understanding your situation.

Use case: Strategic planning, problem-solving.

6. The "Research Synthesizer" Prompt

```
I'm researching [topic]. Here are 5 sources I found:  
[paste sources]
```

```
Synthesize these into:
```

- Main consensus points
- Points of disagreement
- What's missing from this research
- 3 follow-up questions I should explore

Why it works: Turns ChatGPT into a research assistant.

Use case: Academic work, market research, due diligence.

7. The "Decision Matrix" Prompt

I need to decide between [Option A] and [Option B].

Help me create a decision matrix:

1. List key criteria for this decision
2. Weight each criterion by importance
3. Score each option
4. Identify my hidden assumptions
5. What's the deciding factor I'm missing?

Why it works: Structures messy decisions into clear analysis.

Use case: Career moves, tech stack choices, business strategy.

8. The "Jargon Translator" Prompt

```
Translate this [industry jargon-heavy content] into plain English.  
  
Then give me a one-sentence "too long; didn't read" summary.  
  
Then give me 3 questions I should ask to sound informed about this topic.
```

Why it works: Makes any field accessible fast.

Use case: Reading legal docs, technical papers, industry reports.

9. The "Email Speedrun" Prompt

Write [type of email] to [recipient].

Context: [1-2 sentences]

Tone: [professional/casual/friendly/etc.]

Length: Under [X] words.

Include: [specific elements]

Avoid: [things to not say]

Why it works: Hyper-specific = better output. No back-and-forth.

Use case: Daily email writing (saves 5+ hours/week for me).

10. The "Code Explainer" Prompt

```
Explain this code to me:  
[paste code]
```

```
Format:
```

1. What it does (one sentence)
2. How it works (line by line breakdown)
3. Potential issues or edge cases
4. How I'd improve it

Why it works: Better than reading documentation.

Use case: Understanding unfamiliar codebases, learning new languages.

11. The "Idea Stress-Test" Prompt

Here's my idea: [describe idea]

Play devil's advocate:

- What are the fatal flaws?
- What am I assuming that might be wrong?
- Who's already tried this and failed? Why?
- What's the hardest part I'm underestimating?

Why it works: Finds holes before you waste time building.

Use case: Validating business ideas, project planning.

12. The "Content Repurposer" Prompt

Take this [long-form content] and repurpose it into:

- 10 tweet-sized insights
- 3 LinkedIn post ideas
- 5 email subject lines
- 1 Reddit post title

Keep the core message but adapt format for each platform.

Why it works: One piece of content → 19 distribution assets.

Use case: Content marketing, thought leadership.

13. The "Learning Path" Prompt

I want to learn [skill] to achieve [goal].

I have [time commitment] available.

Create a learning path:

- Week-by-week breakdown
- Specific resources (books, courses, projects)
- Milestones to track progress
- Common mistakes to avoid

Why it works: Structured learning beats random tutorials.

Use case: Skill acquisition, career development.

14. The "Analogy Generator" Prompt

Explain [complex concept] using an analogy to [familiar domain].

Make it:

- Accurate (not oversimplified)
- Memorable
- Useful for teaching others

Why it works: Analogies make anything understandable and repeatable.

Use case: Explaining your work to non-experts, teaching.

15. The "Second-Order Thinking" Prompt

If [X happens], what happens next?

Then what happens after that?

Continue this chain 3–4 steps.

What are the non-obvious consequences I should prepare for?

Why it works: Most people stop at first-order effects. This goes deeper.

Use case: Strategy, risk assessment, scenario planning.
